

Renault denies report of emissions cheating software

March 15 2017

Renault is denying a report that its vehicles are equipped with software that allowed its vehicles to cheat on emissions testing.

The statement Wednesday from the French carmaker followed a report in the newspaper Liberation, which claimed to have obtained an investigative document from the Economy Ministry indicating that emissions from two models—the Renault Captur and the Clio IV—spewed emissions more than 300 percent higher than the legal limit in real-life conditions.

The ministry's fraud department handed its findings to prosecutors in November.

French authorities raided Renault premises after Volkswagen was found to have used software to cheat on U.S. diesel [emissions](#) tests. Renault recalled 15,000 cars last year over excessive levels of [harmful gases](#), but the company insisted there was no intentional wrongdoing.
