

SpaceX wants to try recycling more of Falcon 9 rocket

April 1 2017

Space X's Falcon 9 rocket lifted off from the Kennedy Space Center on March 30, 2017

SpaceX CEO and founder Elon Musk said he wants to go further in the reuse of his rockets after successfully launching the first stage of a Falcon 9 rocket that was recycled from a previous flight.

Musk tweeted on Friday that he is looking into a test to bring home the

second stage of the company's new Falcon 9 Heavy [rocket](#) for reuse when the rocket debuts late in the summer.

SpaceX blasted off the recycled first stage, or booster, of a Falcon 9 rocket for the first time on Thursday, a feat that could dramatically lower the cost of space travel.

The Falcon 9 Heavy has a first stage composed of three Falcon 9 engine cores and "will be the most powerful operational rocket in the world by a factor of two," according to the company website.

"Considering trying to bring upper stage back on Falcon Heavy demo flight for full reusability," Musk wrote Friday on Twitter.

"Odds of success low," he said, "but maybe worth a shot."

He then added: "Falcon Heavy test flight currently scheduled for late summer."

SpaceX has for 15 years been honing the technology of powering its boosters back to careful Earth landings on solid ground and in the water.

The goal is to make rocket parts as reusable as cars, planes or bicycles, Musk has said.

Reusing a first-stage booster rocket as was done on Thursday results in an estimated 30 percent savings on the cost of more than \$60 million.

If SpaceX also manages to reuse the second [stage](#) of the rocket, costs will drop even further.

A Twitter user asked if Musk could say what will be in the test payload.

"Silliest thing we can imagine! Secret payload of 1st Dragon [flight](#) was a giant wheel of cheese. Inspired by a friend & Monty Python," Musk answered.

The Dragon is the company's spacecraft that is launched on top of SpaceX rockets. Dragons have delivered cargo to the International Space Station and safely returned to earth.
