

Windows 10 update aims to help identify best photos, videos

May 11 2017

An upcoming feature in Microsoft's Windows 10 system will automatically identify the best photos and videos to help people create highlights of their experiences.

The tool, called Story Remix, will be part of a "Fall Creators Update" to roll out later this year to 500 million personal computers, smartphones

and tablets powered by Windows 10. Microsoft is previewing the update Thursday at a conference in Seattle for applications developers.

Microsoft will also make a Story Remix app for devices running Apple's iOS and Google's Android to help people share images from their children's soccer games and other events.

Apple and Google already offer similar tools to manage images. Both those companies have helped undercut the popularity of PCs running on Windows.
