

Heatwave scorches Europe, from London to Siberia

June 21 2017

The French capital has been placed on heatwave alert

Europe sizzled in a continent-wide heatwave on Wednesday, with London seeing Britain's hottest June day since 1976 as Portugal battled to stamp out deadly forest fires.

More than 1,000 firefighters were still fighting to control the flames that broke out in central Portugal at the weekend, killing 64 people.

Cooler weather was aiding their efforts, but thermometers were still hovering around 35 degrees Celsius (95 degrees Fahrenheit)—a level matched across oven-like swathes of Europe, including Italy, Austria, the Netherlands and even alpine Switzerland.

Two forest fires have also broken out since Sunday on Croatia's southern Adriatic coast, prompting the authorities to evacuate 800 tourists, though the blazes have now been brought under control.

"We were scared, it's true," a Swedish tourist who gave her name only as Karolina told local media. "From the hotel room window it seemed like the fire was at our doors."

As the northern hemisphere marked the summer solstice, firefighters were on alert in Austria, where revellers were due to celebrate the longest day of the year by lighting bonfires for the festival of Saint John.

In Italy, forecasters say the current heatwave could turn out to be the most intense in 15 years, with temperatures around eight degrees above the seasonal average—39 C in Milan and up to 30 in the Alps at an altitude of 1,000 metres (3,300 feet).

A study released Monday warned that deadly heatwaves will become more and more common around the world even if the rise in temperatures is capped at 2.0 degrees Celsius as targeted by the Paris Agreement to combat climate change.

Britain is set to see its first five-day stretch of temperatures over 30 degrees Celsius in June since 1995

"Even if we outperform the Paris targets, the population exposed to deadly heat will be about 50 percent by 2100," Camilo Mora, lead author of the study published in the journal *Nature Climate Change*, told AFP.

London sizzles

Britain saw its first five-day stretch of temperatures over 30 degrees in June since 1995—and the thermometer hit 33.9 C in west London, a UK record for the month since 1976.

In Guildford, southwest of the capital, a road surface melted on Tuesday, with motorists likening it to a bar of chocolate left out in the hot sun.

At the prestigious Royal Ascot horse races, organisers said they were considering relaxing the strict dress code for the first time.

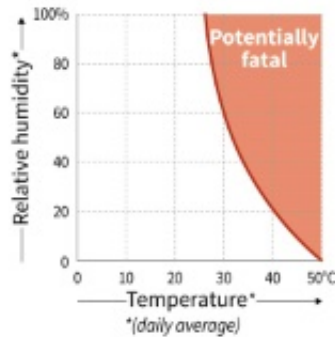

And a thunderstorm was looming over the Glastonbury Music Festival, threatening mud just as an expected 200,000 revellers begin pitching their tents.

Music lovers in France were also braving the heat, as the annual Fete de la Musique—a nationwide celebration with thousands of free street performances—kicked off under an official heatwave declared across many areas of the country.

The national postal service announced that its postmen would be calling on elderly and disabled residents living alone to check they were alright, with Paris sweltering in 37-degree heat.

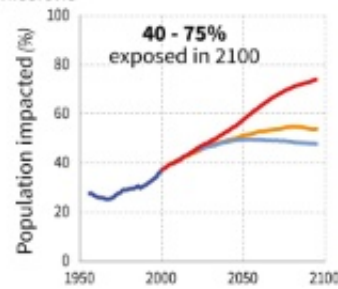

Deadly heatwaves becoming more frequent

Danger level weather conditions:

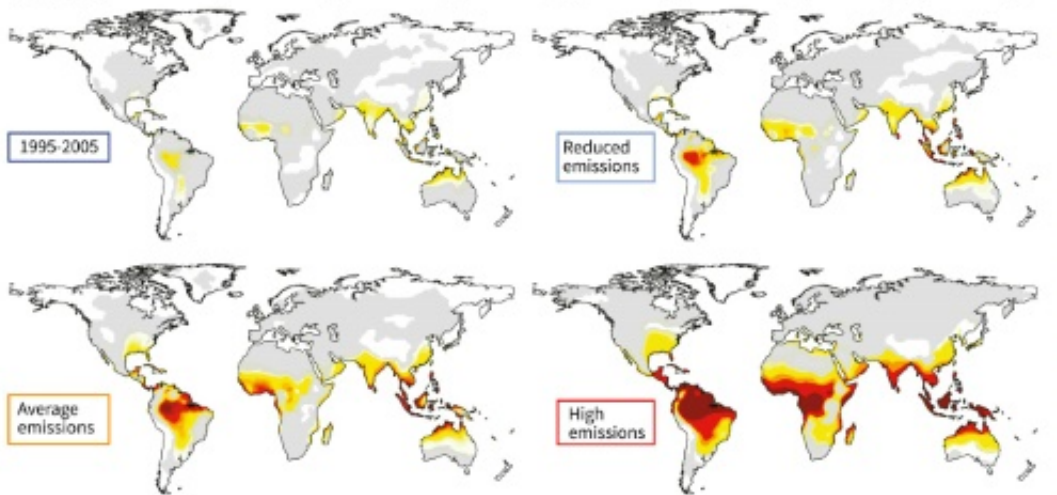

Different climate change scenarios:

— Reduction of greenhouse gases
— Average emissions — High emissions

Number of days above potentially fatal levels

Deadly heatwaves becoming more frequent

Bus drivers in skirts

In the western city of Nantes, a bevy of male bus and tram drivers made headlines with an unusual protest against a ban on their wearing shorts—skirting the rules, literally.

"Our managers say shorts are not suitable for our profession. We've

opted for provocation by coming in skirts, which are allowed for female drivers," said driver Didier Sauvetre, one of around half a dozen baring their legs.

A peak in pollution linked to the heat prompted police in the Paris region to reduce speed limits in some areas and divert heavy goods trucks, with the most polluting vehicles banned from the capital on Thursday.

On Tuesday, the body of a 31-year-old man was pulled out of the Loire river in the central city of Tours after he got dragged down by the current while trying to cool down.

In Russia, Siberia was also suffering a heatwave, with temperatures of up to 37 Celsius in the city of Krasnoyarsk, Channel One television reported.

But at the other extreme, it was just one degree Celsius and snowing in Murmansk in northern Russia, the RIA Novosti news agency reported. Many residents are having to get by with no heating in their flats as centralised systems have been switched off for the summer.
