

'Devastation' as Hurricane Irma slams Caribbean

September 7 2017, by Laurent Czerniejewski, With Gemma Handy In Barbuda

This satellite image obtained from the National Oceanic and Atmospheric Administration (NOAA) shows Hurricane Irma at 1145 UTC on September 6, 2017

Hurricane Irma sowed a trail of deadly devastation through the Caribbean on Wednesday, reducing to rubble the tropical islands of Barbuda and St Martin and claiming at least seven lives.

One of the most powerful Atlantic storms on record, the dangerous

Category Five hurricane was churning off the north coast of Puerto Rico on Wednesday night, on a potential collision course with south Florida where at-risk areas were evacuated.

The French part of St Martin—a pristine resort known for its vibrant nightlife—suffered the storm's full fury: at least six people died and 95 percent of dwellings were decimated, officials said.

"It's an enormous catastrophe. Ninety-five percent of the island is destroyed," top local official Daniel Gibbs said in a radio interview. "I'm in shock. It's frightening."

Guadeloupe prefect Eric Maire called the situation in St Martin "dramatic," saying the island—which is divided between the Netherlands and France—was without drinking water or electricity, and warning the death toll was almost certain to rise.

French President Emmanuel Macron earlier warned the final toll would be "harsh and cruel."

To the southeast, Barbuda, part of the twin island nation of Antigua and Barbuda, suffered "absolute devastation" with 95 percent of properties damaged, and up to 30 percent demolished, according to Prime Minister Gaston Browne.

Hurricane Irma made landfall in Barbuda but is making its way north west towards the Virgin Islands and Puerto Rico

"Barbuda now is literally rubble," Browne said. One person is known to have died on the island of 1,600 residents, apparently a child whose family was trying to get to safer ground.

Irma was packing maximum sustained winds of up to 185 mph (295 kph) as it followed a projected path that would see it hit the northern edges of the Dominican Republic and Haiti on Thursday, continuing past eastern Cuba before veering north for Florida.

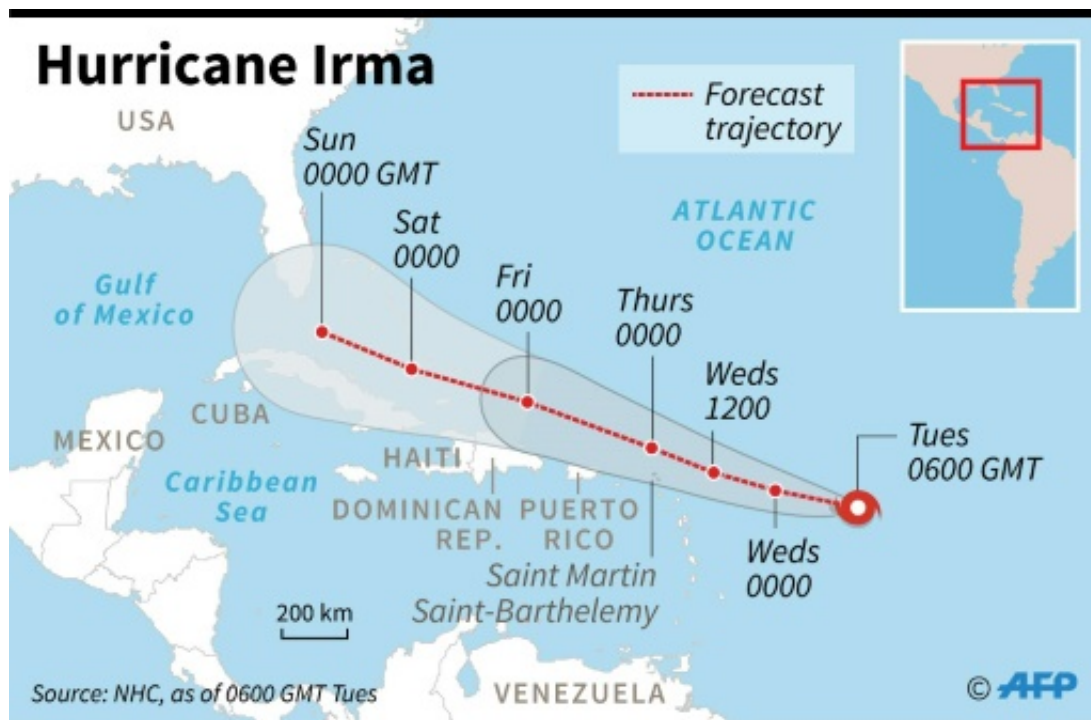

As of 0000 GMT, the eye of the storm was just north of Puerto Rico and the hurricane was moving west-northwest at 16 miles per hour (26 kilometers per hour).

Haiti vulnerable

More than half of Puerto Rico's population of three million is without power, with rivers breaking their banks in the center and north of the island where Governor Ricardo Rossello activated the National Guard and opened storm shelters sufficient to house up to 62,000 people.

Blanca Santiago, who works in a beachside hotel in Puerto Rico's capital San Juan, described the howl of the wind whipping the coastline: "It was as if there were ghosts inside my home."

US President Donald Trump declared a state of emergency in Puerto Rico as well as the US Virgin Islands and Florida where he said the outlook was "not good."

Map showing the forecast track of Hurricane Irma across the Caribbean

Trump spoke by telephone with the governors of all three areas to assure them of the federal government's support.

In Cuba, a state of alert was declared in several eastern and central provinces, with at-risk residents advised to move in with relatives or reach government shelters.

Haiti's northern coast was on hurricane alert, although in the town of Cap-Haitien residents appeared mostly unaware of the impending storm.

"It's thanks to word of mouth that we always learn about these things," said Josue Rosse, as he crouched next to a tree trunk that he was digging out to make a boat.

"We live on the edge of the sea but no one in authority has come to tell us what's what."

Florida in path of storm

Category Five is the highest on the scale for hurricanes in the Atlantic and hurricanes of this intensity are rare. They can cause severe flooding, tear off roofing, shatter windows and uproot palm trees, turning them into deadly projectiles.

Haiti's northern coast has been placed on hurricane alert

Irma follows hot on the heels of Hurricane Harvey which devastated swaths of Texas and Louisiana in late August. Irma was hitting the Caribbean even as two other tropical storms, Jose in the Atlantic Ocean and Katia in the Gulf of Mexico, were upgraded to hurricane status.

With forecasters warning of catastrophe, including surges of up to 25 feet (7.6 meters) above normal tide levels, people evacuated tourist areas, stocked up on provisions, and packed into shelters across an area stretching as far north as Florida.

The Sunshine State is expecting to face the brunt of the storm from Friday night.

Florida Governor Rick Scott said Irma, coming barely a week after

Harvey claimed some 60 lives, posed "a severe threat to the entire state."

Tourists in the popular Key West islands were packing their bags on a mandatory evacuation order, with a similar order for residents due to follow.

"We're emphatically telling people you must evacuate, you cannot afford to stay on an island with a Category Five hurricane coming at you," said Monroe County emergency operations center director Martin Senterfitt.

Panicked residents stripped shelves bare in Miami as they rushed to stockpile everything from bottled water to sandbags before Irma strikes.

This food store in North Miami ran out of water as people stocked up ahead of Hurricane Irma

Gas stations between the Florida Keys and Miami ran out of gas, while nearly all local supermarkets had sold out of bottled water, with fights breaking out among shoppers in some stores.

"People go crazy and buy up everything," 81-year-old Gladys Bosque told AFP in a crowded supermarket in Miami Beach.

"There's no water, no milk, there are very few cans—and no cat food."

Scott, the governor, activated 1,000 members of the National Guard and another 6,000 of the reserve troops will be reporting for duty no later than Friday morning.

A US aircraft carrier with a field hospital and dozens of aircraft able to conduct rescue or supply missions have been put on standby.
