But the attempted breaches raise concerns. (AP Photo/Gerald Herbert, File)

Hackers likely linked to the North Korean government targeted a U.S.

electricity company last month, according to a security firm that says it detected and stopped the attacks.

John Hultquist, director of intelligence analysis for FireEye, said Wednesday that phishing emails were sent to executives on Sept. 22. The attacks didn't threaten [critical infrastructure](#).

It's the latest example of cyberespionage targeting U.S. energy utilities, though experts say such attacks are often more about creating a psychological effect. It's easier to hack into a front-end computer system than tap into industrial controls.

Concerns about hackers causing blackouts have grown since cyberattacks in Ukraine temporarily crippled its [power grid](#) in 2015 and 2016. Such an attack would be harder to accomplish in the North America electricity grid because it's segmented by region.
