

Image: African land cover

October 4 2017

Credit: contains modified Copernicus Sentinel data (2015-2016), processed by Land Cover CCI, ESA

At 20 m resolution, this land cover classification map of Africa was created using 180 000 Copernicus Sentinel-2A images captured between December 2015 and December 2016.

Land-cover mapping breaks down the different types of material on Earth's surface.

This information is important for understanding changes in land use, modelling climate change extent and impacts, conserving [biodiversity](#) and managing natural resources.
