Austrian police say cyber thieves transferred bitcoins worth more than

100,000 euros (\$117,000) from a man's account while he was logged in on a restaurant's public wireless network.

A police statement Wednesday says the bitcoins were moved to an "unknown, non-traceable account" after the unidentified 36-year old logged in southeast of the city of Innsbruck on Tuesday to check the value of his [digital currency](#).

It says it remains unclear whether the victim's account was already hacked before he logged on to the unsecured network.
