

Doctors warn of health emergency as smog blankets India's capital

November 7 2017

Delhi's air quality typically worsens ahead of the onset of winter

A public health emergency was declared in New Delhi Tuesday as a choking blanket of smog descended on the world's most polluted capital city.

The Indian Medical Association's declaration came as the US embassy website said levels of the fine pollutants known as PM2.5 that are most

harmful to health reached 703—well over double the threshold of 300 that authorities class as hazardous.

"We have declared a state of public health emergency in Delhi since pollution is at an alarming level," the head of the Indian Medical Association (IMA) Krishan Kumar Aggarwal told AFP.

"Delhi authorities have to make every possible effort to curb this menace."

The World Health Organization in 2014 classed New Delhi as the world's most polluted capital, with air quality levels worse than Beijing.

Since then authorities have closed power plants temporarily and experimented with taking some cars off the road.

But on Tuesday many residents said too little was being done to tackle the scourge.

"It's a recurring problem and we need to find a quick and permanent solution to it before it is too late," said real estate agent Vipin Malhotra.

"Delhi is becoming unliveable, particularly for children, as the pollution has reached uncontrollable levels."

Low visibility caused by the smog forced the closure of one of the runways at Delhi airport, delaying some flights.

Delhi's air quality typically worsens ahead of the onset of winter as cooler air traps pollutants near the ground, preventing them from dispersing into the atmosphere, a phenomenon known as inversion.

Firecrackers set off to celebrate the Diwali festival of lights in the city

add to the toxic mix created by pollution from diesel engines, coal-fired power plants and industrial emissions.

The World Health Organization in 2014 classed New Delhi as the world's most polluted capital

The problem is further exacerbated by the burning of crop stubble by farmers after the harvest in northern India, a practice that remains commonplace despite an official ban.

Shut schools

Delhi's Chief Minister Arvind Kejriwal said he had asked the state's education authorities to consider shutting schools, a step the IMA has urged.

Unprecedented pollution levels this time last year forced schools to shut for several days.

The IMA had earlier written to Kejriwal calling for an upcoming half marathon to be cancelled, saying the health consequences for runners could be "disastrous".

Running in such conditions could trigger asthma attacks, worsen lung conditions and increase the risk of heart attacks and strokes, it said.

On Monday telecoms giant Airtel threatened to pull its sponsorship of the event, due to be held on November 19, if authorities failed to improve the situation.

A report in the *Lancet* medical journal last month said pollution had claimed as many as 2.5 million lives in India in 2015, the highest in the world.

India's Central Pollution Control Board said high levels of moisture in the air and a lack of wind meant emissions had become trapped in the environment.

"Total calm conditions, marked by the complete absence of wind, has led to the situation," Dipankar Saha, a senior executive with the board, told the Press Trust of India news agency.

"The moisture has trapped emissions from ground-level sources."

The hashtag #smog was the top trending topic on Twitter early Tuesday as angry residents demanded stronger measures to curb pollution.

"This is the state of air quality this morning in Delhi-NCR! Horrific!" posted one resident beside a picture of thick smog.
