

Chicago museum's T. rex Sue to be moved for new display

February 5 2018

A Tyrannosaurus rex fossil that's been on prominent display at Chicago's Field Museum is being moved to make room for a cast of the biggest dinosaur ever discovered.

Officials with the Field Museum say the T. rex named Sue, which has been at the [museum](#) since 2000, will be moved on Monday. The specimen will be updated and moved upstairs to a private suite opening in 2019.

The changes are part of an overhaul to the lakefront museum's main hall.

A 122-foot-long titanosaur, a Patagotitan mayorum from Argentina, is expected to arrive in June. It'll take up a third of the main hall with its head peeking over a 28-foot, second-floor balcony.
