

Robotel: Japan hotel staffed by robot dinosaurs

August 31 2018, by Raito Ono

Dinosaur robots wait to check in customers at the Henn na hotel

The reception at the Henn na Hotel east of Tokyo is eerily quiet until customers approach the robot dinosaurs manning the front desk. Their sensors detect the motion and they bellow "Welcome."

It might be about the weirdest check-in experience possible, but that's exactly the point at the Henn na (whose name means 'weird') chain, which bills itself as offering the world's first hotels staffed by robots.

The front desk staff are a pair of [giant dinosaurs](#) that look like cast members of the Jurassic Park movies, except for the tiny bellboy hats perched on their heads.

The robo-dinos process check-ins through a tablet system that also allows customers to choose which language—Japanese, English, Chinese or Korean—they want to use to communicate with the multilingual robots.

The effect is bizarre, with the large dinosaurs gesticulating with their long arms and issuing tinny set phrases. Yukio Nagai, manager at the Henn na Hotel Maihama Tokyo Bay, admits some customers find it slightly unnerving.

"We haven't quite figured out when exactly the guests want to be served by people, and when it's okay to be served by robots," he told AFP.

But for other guests the novelty is the charm: each room is staffed with mini-robots that look a bit like spherical Star Wars droid BB-8, and help guests with everything from changing channels to playing music.

Even the fish are robotic with electric lights on their battery-powered bodies

Even the fish swimming in the lobby run on batteries, with electric lights in their articulated bodies flickering on and off as they work their way around giant tanks.

"The dinosaurs looked intriguing, and I thought my son would love it," said Chigusa Hosoi, who was at the [hotel](#) with her three-year-old.

"My son is really happy. There's an egg-shaped [robot](#) inside the room. He was playing with it a lot."

The first Henn na Hotel opened in Nagasaki in 2015, and was certified

the following year by Guinness World Records as the world's first hotel with robots on its staff.

The travel agency group that operates the chain now runs eight hotels across the country, all with robots on the staff, some of them [dinosaurs](#), but others taking a more humanoid shape.

Some humans are also on call to intervene in case of glitches, which customer reviews online suggest are a not infrequent problem at check-in.

But Nagai said relying on robots for everything from front desk duty to cleaning had proved an efficient choice in a country with a shrinking labour market.

"It's becoming difficult to secure enough labour at hotels. To solve that problem, we have robots serving guests."
