

Waymo to expand fledgling self-driving car service

November 13 2018

Over the coming months, Waymo will open its self-driving car service up to more people

A self-driving car service being tested by Alphabet-owned Waymo will be opened up to more people in the Phoenix, Arizona, area, chief John

Krafcik said Tuesday.

About 400 "early riders" are already taking part in the fledgling service Waymo began testing early last year, Krafcik said at a Wall Street Journal technology conference in Southern California.

They can use a [smartphone application](#) to summon [autonomous vehicles](#) any time of day to get about in an area about 100 square miles at its maximum, according to Krafcik.

"Now, we are at the point where we are going to expand this step by step, little by little, because this is a very long journey," Krafcik said in an onstage interview, a video clip of which was posted online.

"It's a very challenging technology and we are going to take our time."

Over the course of the next couple of months, Waymo will open the service up to more people and give riders "more autonomy" in what they can do with it, according to Krafcik.

Waymo expected businesses to be interested in using the autonomous ride service to carry customers to and from shops, the Journal reported.

The firm earlier this year announced it was adding as many as 62,000 Fiat Chrysler minivans to its autonomous fleet in an expanded collaboration announced by the companies.
