

French court axes market approval of Bayer's Roundup weed-killer

January 15 2019

Bayer's Roundup weed-killer contains glyphosate, which the French government plans to outlaw by 2021

A French court on Tuesday struck down market approval for the controversial weed-killer Roundup, saying regulators had failed to take safety concerns into account when clearing the widely used herbicide.

Roundup, owned by Germany's Bayer after its purchase of US agro-giant Monsanto last year, contains <u>glyphosate</u> which environmentalists and other critics have long believed causes cancer.

The European Union renewed its authorisation of glyphosate for five years in November 2017, but President Emmanuel Macron has vowed to outlaw its use in France by 2021.

An administrative tribunal in Lyon, southeast France, said Tuesday that the national ANSES food and environmental <u>safety</u> agency should have given more weight to potential safety risks when authorising the use of Roundup Pro 360 in March 2017.

In August, a California court ordered Bayer to pay \$78 million to a groundskeeper with terminal cancer who claimed he had not been adequately informed of the alleged health risks.

The company is appealing the ruling, saying scientific studies have proven glyphosate's safety.

Environmental activists hailed the French decision, noting a 2015 study by a World Health Organization (WHO) agency which concluded that glyphosate was "probably carcinogenic."

"It's a major ruling because it should eventually cover all versions of Roundup, as the court determined that all products with glyphosate are probably carcinogens," said Corinne Lepage, a lawyer for the CRIIGEN genetics research institute.

Glyphosate is used in weed-killers made by several companies, and is currently the most used herbicide around the world.
