

NASA scraps all-women spacewalk for lack of well-fitting suits

March 26 2019

American astronaut Anne McClain at work at the International Space Station on March 22, 2019

The US space agency NASA scrapped Monday a planned historic spacewalk by two women astronauts, citing a lack of available spacesuits

that would fit them at the International Space Station.

Christina Koch will now perform tasks in space Friday with fellow American Nick Hague—instead of Anne McClain as originally planned.

Had Koch and McClain done their [spacewalk](#) together, it would have been the first ever by two women astronauts.

Until now, male-only or mixed male-female teams had conducted spacewalk since the [space station](#) was assembled in 1998—214 spacewalks until now.

McClain worked outside the station last week—with Hague—when she realized that a "medium"-sized upper half of her [spacesuit](#) fit her better.

"Because only one medium-size torso can be made ready by Friday, March 29, Koch will wear it," NASA explained.

The spacesuits aboard the ISS are in fact assemblies of several parts put together as best adapted to each astronaut's body, explained Brandi Dean, spokeswoman of the Johnson Space Center in Houston, Texas where American astronauts are based.

She said two upper parts in each of the three available spacesuit sizes are currently held at the ISS: medium, large and extra large.

"We do our best to anticipate the spacesuit sizes that each astronaut will need, based on the spacesuit size they wore in training on the ground, and in some cases astronauts train in multiple sizes," she said in explaining the problem that hampered Friday's planned spacewalk.

"However, individuals' sizing needs may change when they are on orbit, in response to the changes living in microgravity can bring about in a

body.

"In addition, no one training environment can fully simulate performing a spacewalk in microgravity, and an individual may find that their sizing preferences change in [space](#)."
