

'Amazon' gives e-commerce giant its own internet domain

May 21 2019

The Amazon logo at one of the e-commerce company's logistics centers in France

E-commerce giant Amazon was on its way to running its own online

neighborhood Monday after the internet's address keeper granted the ".amazon" domain to the company.

After waiting in vain for years for the US online retail colossus and an alliance of South American countries to resolve their battle over the right to web addresses ending with ".amazon," the Internet Corporation for Assigned Names and Numbers (ICANN) this month sided with the Seattle-based company.

In 2012, Amazon applied for "[.amazon](#)" and two internationalized versions of the name. Brazil and several other countries put the US company on notice that they were opposed to the idea.

"Due to its inseparable semantic relation to the Amazon forest, that domain should not be, in any way, the monopoly of a company," the Brazilian Ministry of Foreign Affairs argued on its website.

"On the contrary, it is imperative that the States concerned be able to participate in the management and use of the name in order to defend and promote the natural, cultural and symbolic heritage of the Amazon region, as well as foster the regional economy and the digital inclusion of the populations living there."

ICANN said it balanced concerns of all involved and stalled the [company](#)'s application for the domain in hopes the internet firm and member states of the Amazon Cooperation Treaty Organization would work out a solution.

"ACTO and the Amazon corporation have been unable to come to a mutually acceptable solution or agree on an extension of time for continued discussions," ICANN said.

"In light of this, the board is now moving forward with the next steps

laid out... and is directing ICANN org to continue processing the .AMAZON applications toward delegation."

There will be a public comment period as per procedures established for granting new [domain](#) names.

The Brazilian Foreign Ministry said it feared the ICANN decision did not sufficiently take into account the interests of the South American governments involved and undermined the rights of sovereign states.
