Delaware's insurance department says social security numbers and other personal data of almost 100,000 people may have been comprised over

nearly a decade due to a breach at a large vision and dental insurer.

The Delaware News Journal reports someone may have obtained [bank account](#) and routing numbers, [social security numbers](#) and insurance and [tax information](#) from the insurer Dominion National.

The company says the information may have been compromised when a server was accessed by an "unauthorized third party" in 2010.

Dominion National says there's "no evidence that any information was in fact accessed."

The insurer said it discovered the breach in April, and launched an investigation.

Insurance Commissioner Trinidad Navarro said the 95,000 people that could be affected make up roughly 10% of the state's population.
