An apparent meteor has brightened the night sky over St. Louis.

The National Weather Service posted a video of the flashing light streaking across the area Monday night with homes in the background. It

was captured by a volunteer storm spotter in the suburb of O'Fallon.

Other videos posted on [social media](#) showed the Gateway Arch in the background. KSDK-TV Meteorologist Scott Connell says the odds of finding part of the apparent meteor are slim, because it most likely burned up completely.
