

Egypt says it's unearthed large animal mummy, likely a lion

November 11 2019

Egypt's Ministry of Antiquities says local archeologists have unearthed the mummy of an unusually large animal, most likely a lion or lioness.

The ministry said on Monday the [mummy](#) was excavated in Saqqara, a town south of Cairo that was a vast necropolis in antiquity and is home to the famed Step Pyramid.

Archeologists frequently find mummified cats but the recovery of a lion is rare. In 2004, the first lion skeleton was found, revealing the sacred status of the animal during [ancient times](#).

The ministry says it will expand on the discovery at a press conference after running [radar scans](#).

Egypt has stepped up promotion of its archeological treasures in hopes of reviving a tourism sector slow to recover from the 2011 uprising that toppled longtime autocrat Hosni Mubarak.
