

## Thailand reverses ban on weed killer linked to cancer

November 27 2019

Thailand reversed a decision Wednesday to ban a controversial weedkiller and extended the permitted use of two other pesticides for six months, following pushback from its multi-billion dollar agriculture industry.

Glyphosate—a weed killer better known by its trade name Roundup—is a <u>lightning rod</u> for controversy, as more than 42,700 lawsuits pile up in the US with plaintiffs alleging that it caused diseases including terminal cancers.

But it remains popular among farmers in Thailand—one of the world's leading rice and sugar producers—who are among the heaviest users of pesticides in a sector that employs 40 percent of the population.

Studies have linked glyphosate, paraquat and chlorpyrifos to a variety of illnesses, and the kingdom last month decided the trio would be prohibited from its crops by Dec 1.

But Thailand's National Hazardous Substances Committee ruled Wednesday that the continued "limited" use of glyphosate would be permitted, said Industry Minister Suriya Juangroongruangkit, without elaborating.

The committee's decision, which was "unanimous", also allows farmers to continue using the two other pesticides until June 1, 2020, he added.

Paraquat, a herbicide which the US Centers for Disease Control calls "highly poisonous", has been banned in the European Union since 2009, while studies have linked chlorpyrifos to developmental delays in children.

Manufacturer Monsanto—a subsidiary of German chemical giant Bayer—could be on the hook for billions of dollars, though its <u>chief</u> <u>executive</u> has insisted "leading <u>regulatory agencies</u> worldwide are convinced that glyphosate-based products are safe".

The weedkiller remains popular among agricultural workers for its effectiveness and its low cost, and is still widely used in the US.

The US Department of Agriculture had written letters to Thailand asking to delay the ban, saying that it could disrupt soybean and wheat imports to the kingdom.

Suriya of the Industry Ministry said those impacts on Thailand's agroanimal businesses had been overlooked when the ministry originally banned <u>glyphosate</u> in October.

Biothai, a foundation advocating for the ban, called Wednesday's decision "disappointing", adding that a six-month extension for the use of the other two chemicals "could affect the health of farmers, consumers and children".
