Socio-economic changes in sub-Saharan Africa since 1960

As 1960 dawned, sub-Saharan Africa braced for historic change: that year, 17 of its countries were destined to gain independence from European colonial powers.

But six decades on, the continent is mired in many problems. It is struggling to build an economic model that encourages enduring growth, addresses poverty and provides a future for its youth.

Here are some of the key issues:

## **Youth 'explosion'**

Africa's population grew from 227 million in 1960 to more than one billion in 2018. More than 60 percent are aged under 25, according to the Brookings Institution, a US think tank.

"The most striking change for me is the increasing reality of disaffected youth... a younger population that is ready to explode at any moment," Cameroonian sociologist Francis Nyamnjoh told AFP.

"They are hungry for political freedoms, they are hungry for economic opportunities and they are hungry for social fulfilment ."

Joblessness is a major peril. Unemployed youths are an easy prey for armed groups, particularly jihadist movements in the Sahel, or may be tempted to risk clandestine emigration, often at the cost of their lives.

The continent's population is expected to double by 2050, led by Nigeria, Ethiopia and Democratic Republic of Congo (DRC).

A lack of opportunity for Africa's swelling ranks of youths could spell trouble

## Poverty and inequality

The proportion of Africa's population living below the poverty line — less than \$1.90 (1.7 euros) per day — fell from 54.7 percent in 1990 to 41.4 percent in 2015, according to the World Bank.

But this average masks enormous differences from one country to another, exemplified by Gabon (3.4 percent of the population in 2017) and Madagascar (77.6 percent in 2012).

"The inequalities between countries are as extreme as in Asia and the

inequalities within countries as as high as in Latin America, where landless peasants coexist with huge landowners," said Togolese economist Kako Nubukpo.

Christophe Cottet, an economist at the French Development Agency (AFD), pointed out that inequality in Africa is "very poorly measured."

"There are notably no figures on inequalities of inherited wealth, a key issue in Africa."

Even if poverty rates have fallen across much of Africa, the continent is still beset by enormous inequality

## **Mega-cities and countryside**

Recent decades have seen the expansion of megacities like Lagos and Kinshasa, typically ringed by shantytowns where people live in extreme poverty, although many medium-sized cities have also grown.

More than 40 percent of Africans now live in urban areas, compared with 14.6 percent in 1960, according to the World Bank.

In 1960, Cairo and Johannesburg were the only African cities with more than a million residents. Consultants McKinsey and Company estimate that by 2030, about 100 cities will have a million inhabitants, twice as many as in Latin America.

But this urban growth is not necessarily the outcome of a rural exodus, said Cottet.

"The population is rising across Africa as a whole, rather faster in towns than in rural areas," said Cottet.

"There is also the problem of unemployment in towns—(rural) people have little interest in migrating there."

Shanty communities are not unusual in African cities as housing fails to keep pace with the population

## Lost decades of growth

Growth in Africa slammed to a halt in the early 1980s, braked by a debt crisis and structural adjustment policies. It took two decades to recover.

Per-capita GDP, as measured in constant US dollars, shows the up-and-downs, although these figures are official and do not cover Africa's large informal economy: \$1,112 in 1960, \$1,531 in 1974, \$1,166 in 1994 and \$1,657 in 2018.

"If you do an assessment over 60 years, something serious happened in Africa, with the loss of 20 years. But there is no denying that what is happening now is more positive," Cottet said.

The IMF's and World Bank's structural adjustment programmes "broke the motors of growth," said Nubukpo, whose book, "L'Urgence Africaine," (The African Emergency) makes the case for a revamped growth model.

The belt-tightening programmes "emphasised the short term, to the detriment of investments in education, health and training."

Attempts by African countries to get around fiscal constraints didn't always end well, such as this Zimbabwean man who decorated his hat with worthless currency

**New thinking needed**

Africa has a low rate of industrialisation, is heavily dependent on agriculture and its service sector has only recently started to emerge.

"We have not escaped the colonial model. Basically, Africa remains a producer and exporter of raw materials," said Nubukpo.

He gave the example of cotton: 97 percent of Africa's cotton fibre is exported without processing—the phase which adds value to raw materials and provides jobs.

For Jean-Joseph Boillot, a researcher attached to the French Institute for International and Strategic Affairs, "Africa is still seeking an [economic model](#) of development."

"There is very little development of local industries," he said.

"This can only be achieved through a very strong approach, of continental industrial protection—but this is undermined by the great powers in order to pursue free trade.

"The Chinese, the Indians and Westerners want to be able to go on distributing their products."

Nearly all of Africa's cotton is exported without having been processed

Sub-Saharan Africa has half of the countries deemed to the world's most corrupt by Transparency International

## **Governance problem**

Lack of democracy, transparency and efficient judicial systems are major brakes on African growth, and wealth is concentrated in the hands of a few, said the experts.

Of the 40 states deemed last year to be the most world's most corrupt countries, 20 are in sub-Saharan Africa, according to Transparency International.

"Africa is not developing because it is caught in the trap of private

wealth and the top wealth holders are African leaders," said Nubukpo.

"We must promote democracy, free and transparent elections to have legitimate leaders who have the public interest at heart, which we absolutely do not have."

Nyamnjoh also pointed to marginalised groups—"There should be more room for inclusivity of voices, including voices of the young, voices of women."
