

Volunteer tourism can aid disaster recovery

January 6 2020, by Leilah Schubert

Holidaying in a disaster zone might seem crazy, but "volunteer tourism" can actually help communities recover from natural disasters, a new study finds. And it can offer a unique and rewarding experience for

volunteers, if done carefully.

"When disaster hits a [tourist destination](#)—whether fire, flood, cyclone or earthquake—tourists naturally stay away, leaving communities to deal with loss of income on top of costs of repair and [recovery](#)," says study co-author Dr. David Beirman, from the University of Technology Sydney.

"On the other hand, people who feel a natural curiosity, as well as a natural desire to help, are keen for experiences where they can interact with locals and make a difference," he says.

He notes that [volunteer](#) tourism should not be confused with "disaster tourism" in which tourists immediately travel to a scene not to help but to look.

The researchers examined the impact of volunteer tourism programs in Nepal in the wake of the April 2015 earthquake. They found that when it was done in an ethical manner that considered local conditions and the community, it could aid recovery and resilience.

The study "Engaging volunteer tourism in post-disaster recovery in Nepal" with UTS Business School co-authors Associate Professor Stephen Wearing and Dr. Simone Faulkner, was recently published in the Annals of Tourism Research.

The Nepal earthquake, which measured 8.1 on the Richter scale, killed nearly 9,000 people and injured 22,000, and caused severe damage to buildings and infrastructure.

In the four months that followed the Nepal earthquake, international tourism more than halved.

Initially most relief organisations asked international volunteers not to

come unless they had specific expertise, such as medical skills, building skills, or emergency response experience.

Then the Pacific Asia Travel Association and Nepalese tourism industry leaders worked together to produce the report of the Nepal Rapid Recovery Task Force, running workshops with more than 200 tourism industry leaders and professionals.

The strategy they came up with prioritised potential tourism regrowth markets, including volunteer tourism.

Nepal relaxed conditions to allow international tourists to volunteer on a wide range of projects including rebuilding homes and schools, interning in hospitals, supporting non-government organisations and re-establishing sustainable agriculture.

"Nepal's tourism recovery since the April 2015 earthquake has been remarkable and as our research shows, volunteer tourism has been a significant driving force for that recovery," says Dr. Beirman who was involved in the Nepal Rapid Recovery Taskforce.

In 2015, the year of the earthquake, just under 600,000 international tourists visited. By 2018 the number had reached an all-time record of almost 1.2 million. In 2019 it grew further.

The Nepal Association of Tour and Travel Agents says almost one third of the tours booked to Nepal in the two years after the [earthquake](#) comprised groups who combined tourism experiences with volunteering or philanthropy.

"Nepal already had an extensive infrastructure of volunteer tourism organisations and programs, and this was a significant advantage in establishing post-disaster recovery programs," says Dr. Beirman.

Dr. Faulkner notes that while volunteer tourism is an important way to help destinations recover, care needs to be taken to ensure programs benefit both the community and volunteers, using an ethical approach that allows local communities to drive individual projects.

"The success of volunteer tourism also depends on the willingness of volunteer tourists to engage in a travel experience that involves engaging in work that more mainstream tourists may view as a hardship," says Dr. Faulkner.

"In times of national crisis, the priority of a government has to be restoring the welfare of its people. However, the process by which that happens is multifaceted. In destinations that rely on tourism as a primary source of investment, it can make sense to build volunteer [tourism](#) into the recovery process," she says.
