

Fires contained in hard-hit Australia state, but now floods threaten

February 13 2020, by Holly Robertson, Andrew Leeson

The Australian bushfires raged for months, devastating tens of thousands of hectares

All the blazes in Australia's hard-hit state of New South Wales have been brought under control, firefighters said on Thursday, signalling the end

of a "black summer" that claimed 33 lives nationwide.

But [heavy rains](#) that helped extinguish the blazes that have raged along the east coast since September are causing [flash floods](#) in parts of the state, posing new problems for some residents.

"Not all fires are out, there's still some [fire activity](#) in the far south of the state but all fires are contained so we can really focus on helping people rebuild," the state's [fire](#) service deputy commissioner Rob Rogers said on Twitter.

"It is very good news," a Rural Fire Service spokesman told AFP.

Bushfires scorched more than 10 million hectares in the country's east and south, killing at least 33 people and an estimated one billion animals, while destroying more than 2,500 homes.

The crisis cloaked [major cities](#) including Sydney in smoke for weeks on end, saw towns cut off and prompted the deployment of the military to rescue stranded citizens.

Beleaguered volunteer firefighters have fought the blazes day-in-day-out in what has been described as Australia's "black summer".

The fires were exacerbated by prolonged drought and worsened by [climate change](#) in the country's hottest and driest year on record.

After months of devastating bushfires, parts of Australia are now battling flash floods brought by record rains

Not threatening

Days of recent rainfall have extinguished the largest fires and brought those that remain under control.

In the Australian Capital Territory around Canberra firefighters are still trying to bring one blaze under control, but it was not said to be threatening.

Attention has now turned to tackling flash flooding expected in the coming days following the heaviest rains in 30 years.

On Thursday dams near Sydney overflowed after days of torrential rain, a spectacular reversal from months of drought.

The Nepean dam was just a third full less than a week ago, but on Thursday video footage showing water cascading over the dam wall.

Hundreds of people have been rescued from floodwaters in recent days.

Wild weather is set to ramp up again from Friday, with the Bureau of Meteorology forecasting ex-Tropical Cyclone Uesi would bring "damaging to destructive winds" and heavy rainfall to remote tourist destination Lord Howe Island.

Senior meteorologist Grace Legge said storms were also expected for Queensland and New South Wales—with areas still recovering from bushfires likely to be hit again.

"Any showers and thunderstorms that do develop are falling on already saturated catchments, so there is a risk with severe thunderstorms of flash flooding," she said.
