

Intensive lab experiences and online learning during the COVID-19 pandemic

November 4 2020

"With our rapid pivot to online instruction, it is more important than ever to ensure our students have meaningful field-based experience," said co-author Robert McCleery, PhD, of the University of Florida. Credit: Dr. McCleery

For students studying ecology and evolution, it's important to experience the processes and concepts they are learning about nature in nature. As a result of the COVID-19 pandemic, however, field-based courses rapidly transitioned to online only delivery. An article published in *Ecology and Evolution* discusses the potential advantages of pairing an intensive lab experience with an otherwise online delivery.

The authors note that a short but intensive time period in the field may be better than the traditional low intensity weekly lab structure because its allow a group to be tested and isolated, offers more flexibility for students with competing interests for their time, and enhances [student interpersonal skills](#).

"With our rapid pivot to online instruction, it is more important than ever to ensure our students have meaningful field-based experience," said co-author Robert McCleery, Ph.D., of the University of Florida.
