

# Australia hits out at threatened UN downgrade of Great Barrier Reef

June 22 2021, by Holly Robertson With Clare Byrne In Paris

---

The Great Barrier Reef was worth an estimated \$4 billion a year in tourism revenue for the Australian economy before the coronavirus pandemic.

Australia said Tuesday it will strongly oppose a UNESCO plan to list the Great Barrier Reef as being "in danger" over deterioration caused by

climate change.

The UN body released a draft report on Monday recommending the [reef](#)'s World Heritage status be downgraded because of its dramatic coral decline, after years of public threats to do so.

"It's a warning to the [international community](#) and all of humanity that the coral ecosystem is in danger," Fanny Douvère, the head of UNESCO's World Heritage marine programme, told an online press briefing.

The reef is one of seven sites threatened with being added to the endangered heritage list over ecological damage, overdevelopment, overtourism or security concerns.

The Italian city of Venice, which has been overrun with tourists, and the waterfront of the English city of Liverpool, which is undergoing a major redevelopment, are among the other listings in UNESCO's sights.

Environmental campaigners said the threat to the Great Barrier Reef's heritage status highlight Australia's lack of action to curb the carbon emissions which contribute to global warming.

Environment Minister Sussan Ley said Australia would challenge the move, accusing UN officials of backflipping on their assurances ahead of the World Heritage Committee's 44th session in China next month, where the recommendation will be formally considered.

The Great Barrier Reef has now suffered three mass coral bleaching events in the past five years, losing half its corals since 1995.

"Politics have subverted a proper process and for the World Heritage Committee to not even foreshadow this listing is, I think, appalling," she told reporters in Canberra.

The UN body did not consider the billions of dollars spent attempting to protect the world's largest coral reef, she added.

**'From poor to very poor'**

The committee's draft report did commend Australia's efforts to improve reef quality and its financial commitment.

But it noted "with the utmost concern and regret... that the long-term outlook for the ecosystem of the property has further deteriorated from poor to very poor," referring to Australia's move to downgrade the reef's health status after back-to-back mass bleaching events in 2016 and 2017.

Ley said she had spoken to UNESCO Director-General Audrey Azoulay overnight Monday to express "very clearly our strong disappointment, even bewilderment".

Placement on the UN body's in-danger list is not considered a sanction. According to UNESCO, some nations have their sites added to gain international attention and help to save them, but it is seen as a dishonour by others.

The Selous game reserve in Tanzania, which could be stripped of World Heritage status after poachers have run amok.

UNESCO has recommended that a total of seven sites be added to the endangered list and that two sites—Liverpool's waterfront and Selous game reserve in Tanzania, where poachers have run amok—be stripped of their World Heritage status altogether.

Australia has resisted calls to commit to a target of net-zero [carbon emissions](#) by 2050, with Prime Minister Scott Morrison saying the country hoped to reach carbon neutrality "as soon as possible" without harming its commodity-dependent economy.

The downgrade recommendation for the Great Barrier Reef prompted [environmental groups](#) to take aim at the Australian government's reluctance to take stronger climate action.

## 'Shame'

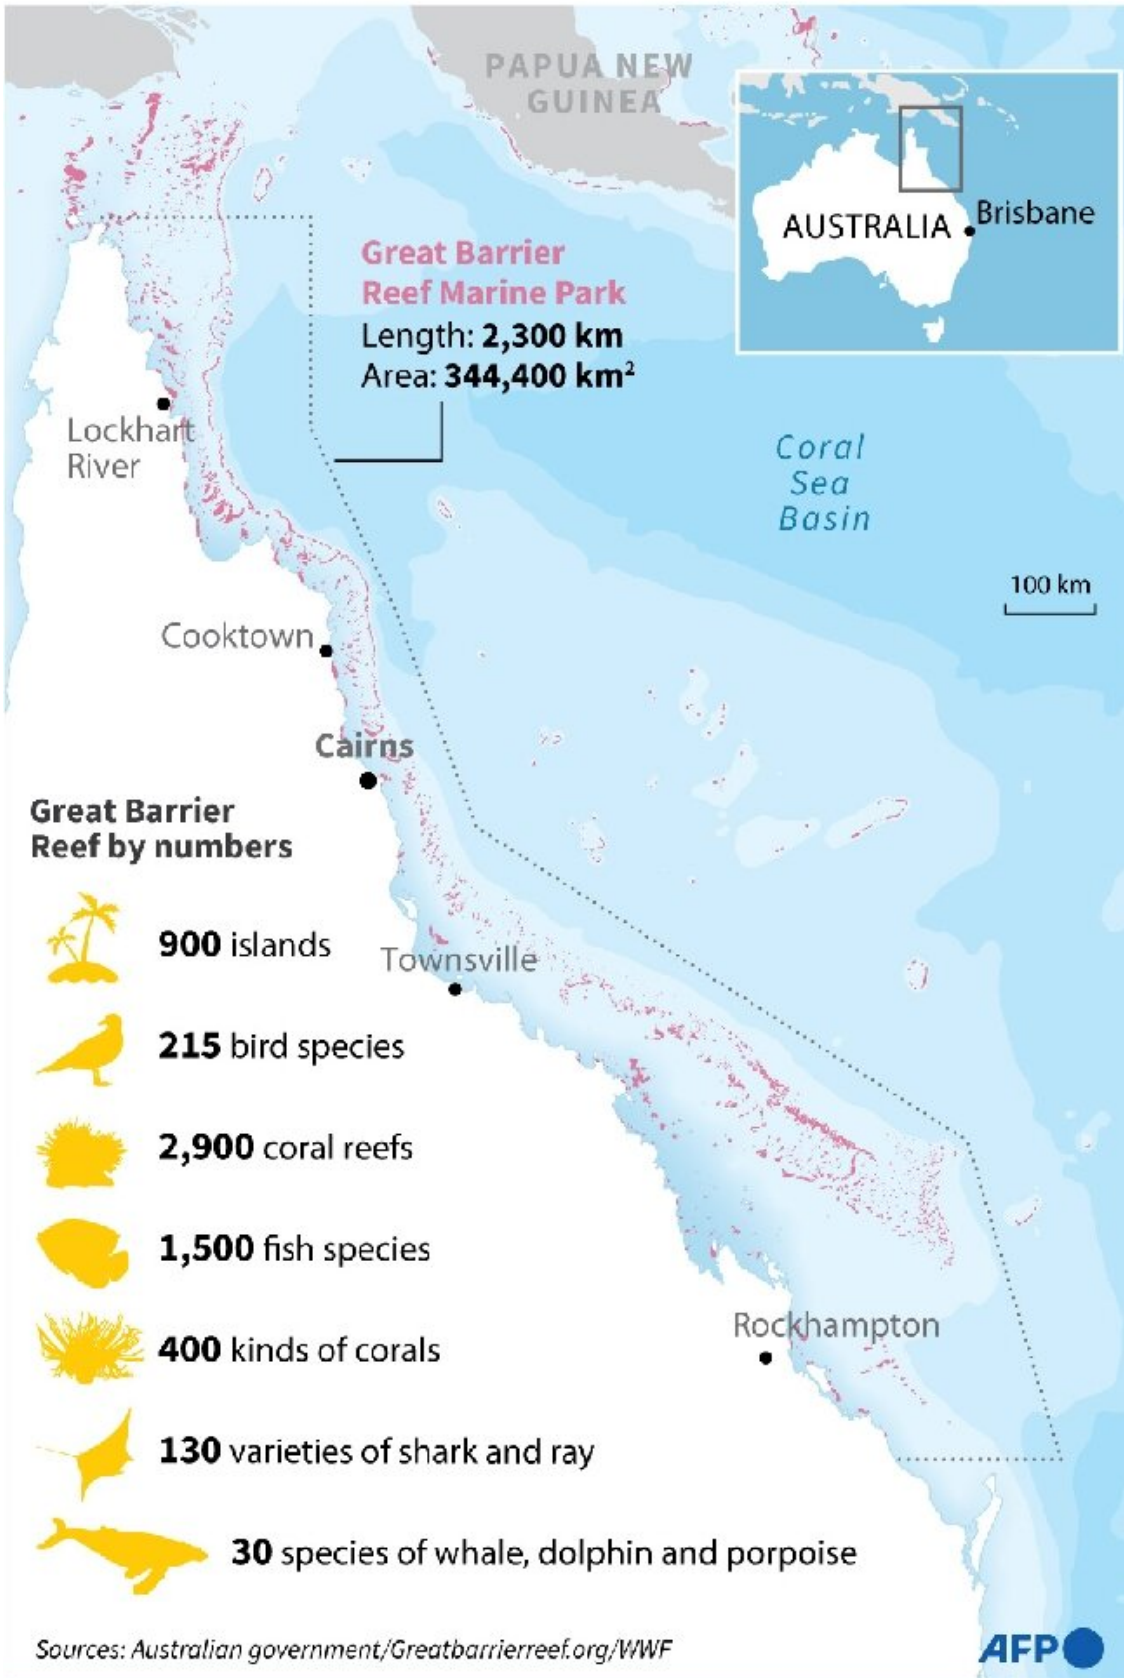

The Climate Council said it brought "shame on the federal government, which is standing by as the reef declines rather than fighting to protect it".

"The recommendation from UNESCO is clear and unequivocal that the Australian government is not doing enough to protect our greatest natural asset, especially on [climate change](#)," said WWF head of oceans Richard Leck.

UNESCO's Douvère acknowledged that Australia had made

"tremendous efforts" to shore up the reef.

# Great Barrier Reef

The Great Barrier Reef, by the numbers.

"The Australian government cannot save the Great Barrier Reef by itself," she said, while adding that Canberra could act to improve water quality at the reef, which would increase its resilience to climate change.

Aside from its inestimable natural, scientific and environmental value, the 2,300-kilometre-long (1,400-mile-long) reef was worth an estimated US\$4.8 billion a year in tourism revenue for the Australian economy before the coronavirus pandemic.

In December, the International Union for Conservation of Nature (IUCN) said climate change had pushed the reef into critical condition.

Australian Marine Conservation Society environmental consultant Imogen Zethoven said the UNESCO report made clear that limiting global temperature rises to 1.5 degrees Celsius above pre-industrial levels was critical for the reef.

"Australia's climate record is more consistent with a 2.5-3.0 Celsius rise in global average temperature -- a level that would destroy the Great Barrier Reef and all the world's coral reefs," she said.

The Great Barrier Reef has now suffered three mass coral bleaching events in the past five years, losing half its corals since 1995 as ocean temperatures have climbed.

The reef has also been battered by several cyclones as climate change drives more extreme weather and outbreaks of crown-of-thorns

starfish—which eat the coral—in recent decades.
