

Millions sweltering in US west as Canada takes emergency steps

July 12 2021

Sweltering conditions hit much of the Pacific seaboard and as far inland as the western edge of the Rocky Mountains over the weekend.

Millions of people across the western United States and Canada were hit Sunday by a new round of scorching hot temperatures, with some roads

closed, train traffic limited and new evacuations ordered.

In Canada, with wildfires continuing to spread—including 50 more blazes erupting in the past two days—the government announced new emergency measures aimed at preventing further fires.

Sweltering conditions hit much of the Pacific seaboard and as far inland as the western edge of the Rocky Mountains over the weekend.

"A dangerous heat wave will affect much of the western US, with record-breaking temperatures likely," the National Weather service said on its website Sunday, while Canadian meteorologists predicted highs approaching 90 Fahrenheit (32 Celsius) in parts of western Canada—well above seasonal norms.

Las Vegas on Saturday matched its all-time record of 117 degrees Fahrenheit, according to the National Weather Service (NWS)—a [temperature](#) recorded in the desert entertainment city once in 1942 and three other times since 2005.

Sunday was expected to be only a few degrees cooler there, while Death Valley, California—often the nation's hottest spot—was headed for a high of 126 degrees Fahrenheit.

Forecasters issued an excessive heat warning for several other urban centers including the southern city of Phoenix and San Jose, the center of the Silicon Valley tech industry south of San Francisco.

Death Valley, California—often the nation's hottest spot—was headed for a high of 126 degrees Fahrenheit.

The weekend's hot weather follows an earlier heat wave that struck the western United States and Canada at the end of June.

The scorching conditions saw the all-time record daily temperature broken three days in a row in the Canadian province of British Columbia.

Warming temperatures

Canadian transport minister Omar Alghabra on Sunday announced new

emergency measures aimed at preventing further wildfires in the tinder-dry region, including steps to slow or limit train traffic.

Trains are a common cause of wildfires, often when their spark-arresting devices are poorly maintained.

Several roads and highways in the area have been closed as the government rated the wildfire risk in much of the province as "extreme." A dozen towns or locales remained under evacuation orders.

The Canadian government has sent investigators to the town of Lytton, 150 miles (250 kilometers) northeast of Vancouver, to see whether a passing cargo train might have caused a late June fire that destroyed 90 percent of the town.

The scorching conditions saw the all-time record daily temperature broken three days in a row in the Canadian province of British Columbia.

Last month was the hottest June on record in North America, according to data released by the European Union's climate monitoring service.

The overall death toll in British Columbia was not yet known but is thought to run into the hundreds.

As of Sunday morning, the number of wildfires across British Columbia was continuing to rise, hitting 298, authorities said.

In the US state of Oregon, the Bootleg Fire more than tripled in size between Friday and Sunday, gaining more than 100,000 acres, according to the US Forest Service.

Last month was the hottest June on record in North America, according to data released by the European Union's climate monitoring service.

Human activity has driven [global temperatures](#) up, stoking increasingly fierce storms, extreme heatwaves, droughts and wildfires.

The World Meteorological Organization and Britain's Met Office said in May there was a 40 percent chance of the annual average global temperature temporarily surpassing 1.5 degrees above pre-industrial temperatures within the next five years.

The past six years, including 2020, have been the six warmest on record.
