

# SpaceX's tourist crew 'healthy, happy and resting'

September 16 2021

**First all-civilian crew space mission**  
SpaceX's Crew Dragon capsule without professional astronauts on a three-day orbit around the Earth

Launched Sept 15 from Florida

**HAYLEY ARCENEUX**  
Age: 29  
Cancer survivor, physician assistant at St Jude's Hospital in Tennessee  
Youngest American sent to orbit around Earth and 1<sup>st</sup> person with prosthesis to go into space  
**Mission role: medical manager**  
Seat: represents 'hope'

**SIAN PROCTOR**  
Age: 51  
Geology teacher in Arizona, former astronaut candidate  
Won seat by creating an online sales site linked to space  
**Pilot**  
Seat: represents 'prosperity'

**JARED ISAACMAN**  
Age: 38  
Billionaire pilot who chartered the mission  
Holds a record for flying around the world in a light jet  
**Mission commander**  
Seat: represents 'leadership'

**CHRIS SEMBROSKI**  
Age: 42  
Air Force veteran who served in Iraq  
Selected after making a donation as part of a fundraiser for St. Jude's Hospital  
**Manage cargo on board, communications with Earth**  
Seat: represents 'generosity'

Graphic on the four all-civilian passengers on SpaceX's mission to orbit around the Earth, launched September 15 from Florida.

SpaceX's all-civilian Inspiration4 crew are "healthy, happy and resting comfortably," the company said Thursday in its first update since the pioneering mission blasted off from Cape Canaveral the night before.

The four American space tourists "traveled 5.5 times around Earth, completed their first round of scientific research, and enjoyed a couple of meals" before going to bed, Elon Musk's company said.

Musk tweeted that he had personally spoken with the crew and "all is well."

After waking up, they will get their first look out of the Dragon ship's cupola—a large observation dome that has been fitted onto the vessel for the first time, in place of a docking mechanism.

Billionaire Jared Isaacman, physician assistant Hayley Arceneaux, geoscientist Sian Proctor and aerospace data engineer Chris Sembroski are orbiting the globe at an altitude that at times reaches 590 kilometers (367 miles).

That is deeper in space than the International Space Station, which orbits at 420 kilometers (260 miles), and the furthest any astronauts have ventured from our planet since a 2009 maintenance mission for the Hubble telescope.

The mission aims to raise \$200 million for St Jude's Children's Research Hospital, and study the biological effects of deep space on the astronauts' bodies.

Its main goal, however, is to prove that space is accessible to [ordinary people](#) as the United States and [private companies](#) like SpaceX seek to further commercialize the cosmos.

The space adventure bookends a summer marked by the battle of the billionaires Richard Branson and Jeff Bezos to reach the final frontier.

But these flights only offered a few minutes of weightlessness—rather than the three full days of orbit the Inspiration4 crew will experience, before splashing down off the coast of Florida on Saturday.
