

Harassment and discrimination in astronomy take many forms, says new report

March 29 2022

Types of Harassment and Discrimination Experienced by Respondents, 2012 to 2013

Biased Perceptions	Assumptions about status	
	Assumptions about career	
	Assumptions about work–life balance	
Put Downs	Jokes at expense	
	Criticisms	Appearance Family decisions
	Undermining competence	
	Undermining belonging	
Inequitable Treatment Based on Demographics	Less social support	
	Exclusion from events	
	Unfair grades	
	Fewer career opportunities	
Sexual Attention	Inappropriate sexual comments	
	Inappropriate behavior	Inappropriate staring or watching
		Inappropriate romantic relationships
		Inappropriate touching
	Threatening behavior	Making rape threats
		Stalking
		Assault

The existence of harassment and discrimination in academia has been well documented across a variety of fields of study. A report from the American Institute of Physics goes beyond the numbers to examine types of harassment experienced by members of the astronomy community over the span of a decade, highlighting the pervasiveness of the issue.

The AIP Longitudinal Survey of Astronomy Graduate Students was initiated by the American Astronomical Society (AAS) in 2006 to better understand the forms and long-term impacts of [harassment](#) in the field of astronomy. The study polled astronomy graduate students during the 2006-07 school year and followed up with those same people in 2012-13 and in 2015-16 after they entered the workplace.

Across the study, 33% of the respondents reported experiencing harassment and [discrimination](#) at school or work. Those respondents were then asked to describe the circumstance of their harassment or discrimination.

Four types of harassment and discrimination were prevalent in the answers:

- Biased assumptions that were communicated to the respondents regarding their status, career, and personal life
- Verbal put-downs in the form of jokes, criticisms, and undermining comments
- Demographic-based inequitable treatment that limited their [social support](#) and professional development
- Unwanted sexual attention, ranging from inappropriate comments to more serious behaviors such as threats, stalking, and assault

"Our examination of the context reveals the depth and variety of forms of harassment and discrimination," said AIP's Rachel Ivie, co-author of the resulting report, *Exploring Harassment and Discrimination Experiences in Astronomy*. "Because harassment and discrimination are so pervasive, they seem to be part of the climate and structure of astronomical educational and work settings, occurring in many different situations and across career stages."

The study respondents described incidents of harassment in locations ranging from classroom/seminar settings to academic conferences and social events to workplaces. Many of the incidents were based on gender, but some were based on other statuses like race or socioeconomic position.

Some targets who reported the incidents—either through official or unofficial channels—did not receive support, and in one case, the person was blamed for the reported behavior.

"Strengthening efforts to eliminate all forms of harassment and discriminating behavior, and providing support to those who need it, are essential actions to create a safe and inclusive scientific community for all," said Michael Moloney, CEO of AIP. "This study illustrates that the astronomy community is right to continue to examine and question its culture—and other disciplines can surely draw lessons from this report."

Since the AIP study was undertaken, AAS has implemented several measures aimed at reducing harassment in the astronomy community. The society adopted a clear [code of ethics](#) and an anti-harassment policy that governs behavior at AAS-sponsored meetings, publications, and other activities, backed by a complaint process and an ethics committee.

It also implemented a site visit program, in which an [astronomy](#) department or institute can request an external committee, sent by AAS,

to visit, conduct interviews, and assess the climate of the department.

"A poll of recent graduate students is now needed to test our progress," said AAS president Paula Szkody. "Awareness is one critical aspect. Studies like the AIP Longitudinal Survey of Astronomy Graduate Students provide valuable insight into the realities and forms of harassment and discrimination in the field, better positioning us to continue to tackle such behavior as a community."

"Harassment and discrimination can reinforce or realign power differentials in academic work and [educational settings](#)," said Ivie. "It is important to question and restructure the organizational settings that enable these behaviors."
