

# Mystery sarcophagus found in Notre-Dame to be opened

April 14 2022

---

The sarcophagus found in Notre-Dame's depths will soon be opened, allowing scientists to study its human remains.

A mysterious leaden sarcophagus discovered in the bowels of Paris' Notre-Dame cathedral after it was devastated by a fire will soon be

opened and its secrets revealed, French archaeologists said Thursday.

The announcement came just a day before the third anniversary of the inferno that engulfed the 12th century Gothic landmark, which shocked the world and led to a massive reconstruction project.

During preparatory work to rebuild the church's ancient spire last month, workers found the well-preserved sarcophagus buried more than a metre (three feet) underground, lying among the brick pipes of a 19th century heating system.

But it is believed to be much older—possibly from the 14th century.

Scientists have already peeked into the sarcophagus using an endoscopic camera, revealing the upper part of a skeleton, a pillow of leaves, fabric and as-yet unidentified objects.

The sarcophagus was extracted from the cathedral on Tuesday, France's INRAP national archaeological research institute said during a press conference.

It is currently being held in a secure location and will be sent "very soon" to the Institute of Forensic Medicine in the southwestern city of Toulouse.

Forensic experts and scientists will then open the sarcophagus and study its contents, to identify the skeleton's gender and former state of health, lead archaeologist Christophe Besnier said, adding that carbon dating technology could be used.

Noting that it was found under a mound of earth that had furniture from the 14th century, Besnier said "if it turns out that it is in fact a sarcophagus from the Middle Ages, we are dealing with an extremely

rare burial practice".

They also hope to determine the social rank of the deceased. Given the place and style of burial, they were presumably among the elite of their time.

However, INRAP head Dominique Garcia emphasized that the body will be examined "in compliance" with French laws regarding human remains.

"A human body is not an archaeological object," he said. "As human remains, the civil code applies and archaeologists will study it as such."

Once they are done studying the sarcophagus, it will be returned "not as an archaeological object but as an anthropological asset," Garcia added.

And could Notre-Dame, this unknown person's home for so many centuries, serve as their final resting place?

INRAP said the possibility of "re-internment" in the cathedral was being studied.
