

Rattled Taiwan hit by more aftershocks

September 19 2022

Roads in Hualien county were torn up by Sunday's quake.

Aftershocks struck southeastern Taiwan on Monday, including a 5.5-magnitude earthquake that was felt in the capital Taipei, a day after a more powerful tremor killed one person and injured around 150 others.

The latest quake hit around 10 am (0200 GMT), 66 kilometres (41 miles) south-southwest of the coastal city of Hualien at a depth of 13 kilometres, the United States Geological Survey (USGS) said.

Taiwan's central weather bureau put the magnitude at 5.9.

Rural and sparsely populated southeastern Taiwan has been rattled by a series of jolts since Saturday.

The most powerful, a 6.9-magnitude quake, struck on Sunday afternoon, tearing up [roads](#) and bringing down a handful of houses in the town of Yuli where at least one person was killed.

Four others were rescued from a collapsed building, while authorities said a total of 146 suffered injuries.

Taiwan is regularly hit by quakes and most cause minimal damage but the island also has a long history of deadly disasters.

Hualien, a tourist hotspot, was struck by a 6.4-magnitude earthquake in 2018 that killed 17 people and injured nearly 300.

In September 1999, a 7.6-[magnitude](#) quake killed around 2,400 people in the deadliest natural disaster in the island's history.
