A new book by Stephanie Sodero of the HCRI explores the intersection between fossil fuel-powered mobility and climate change and how communities and mobility need to be revolutionized in Sodero's homeland of Canada and beyond in the context of climate change.

["Under the Weather: Reimagining Mobility in the Climate Crisis"](#) by Sodero, the Lecturer in Climate Change and Health, is published by McGill-Queen's University Press and comes out on November 15, 2022.

"My home was hit by Hurricane Fiona just a few weeks ago, causing much disruption and devastation," said Sodero. "I hope the book will shape conversations about [climate action](#) and community resilience on the ground with policy makers, transport managers, climate advocates, and many more.

"While writing was a long road, the book and its ideas are only increasing in relevance as communities near and far are confronted with climate impacts on their doorsteps."
