

# 'Where are the mackerel?' Alarm as Bosphorus fish stocks crash

November 25 2022, by Anne CHAON

---

Angler Mehmet Dogan holds up a bonito he caught on the Bosphorus in Istanbul, as a boat hauls in its catch.

Despondent Sunday anglers watch crestfallen as a trawler winches an enormous net out of the waters of the Bosphorus.

"Clear off!" they shout from the shore, impatient to get their hooks back into the depths of the strait that runs through Istanbul.

"I have been here since 6 am but a trawler came and dropped its nets. That blocked us completely," grumbled Mehmet Dogan, fed-up at only having caught one fish all day, a 40-centimetre (16-inch) bonito.

It is high season for the popular variety of tuna, with shoals teeming through the Bosphorus on their way from the Black Sea to the Mediterranean.

But pulled taut across the strait are fishing nets more than a kilometre (3,280 feet) long.

Anglers like Dogan who cram shoulder to shoulder along the banks say the nets leave them with little chance—and the fish with even less.

Fish stocks in the Bosphorus have plummeted, according to Saadet Karakulak of Istanbul University. In the space of a few years, hauls have fallen from 500,000 to 600,000 tonnes a year to 328,000 tonnes, she said, saying it is "proof that stocks are diminishing".

"Because of these boats, the fish can't enter the Bosphorus," rued angler Murat Ayhanoglu, standing at Kirecburnu cove on the European side. "They can't leave their eggs here."

A fishing boat hauls in its catch on the Bosphorus in Istanbul.

Nearby on the Gorenler II, a 35-metre trawler, the crew heaved in a net weighed down with fish.

There's no chance of catching anything when boats like that are here, said Ayhanoglu, as he reeled off a list of fish getting ever rarer in the Bosphorus—horse mackerel, anchovy, picarel and bluefish.

## **'Race to overfish'**

But the dramatic fall in stocks didn't stop the government trying to close the strait to traffic for half a day this month to give free rein to

commercial fishing boats.

The transport ministry later backed down after protests from scientists and campaigners about the "race to overfish" what they term is a biologically important "corridor".

"You can't do that. Stocks are in danger... We need sustainability," said Bayram Ozturk, head of the marine biology department at Istanbul University.

He said it was [high time](#) for quotas on some species, with the anchovy currently threatened.

Anglers fishing in the Bosphorus in Istanbul say trawlers are taking all the fish.

Plastic waste, pollution and heavy maritime traffic are also blighting [fish stocks](#) in one of the world's business shipping lanes, warned Ozturk, who is also director of the Turkish Marine Research Foundation.

From [container ships](#) to tankers to bulk carriers transporting badly needed Ukrainian cereals to world markets, more than 200 ships a day pass through the Bosphorus.

With the strait only 760 metres wide at its narrowest point, Ozturk said fish stocks need to be managed by the region's nations.

"Fish don't have a passport. They spawn on the Ukrainian side (of the Black Sea), travel to the Turkish side", he said, and might end up being eaten on Greek island.

## **'We have to make sacrifices'**

Competition between trawlers is "ferocious", said captain Serkan Karadeniz as his boat waited to leave the quay to fish for bonito, having chased them all the way from its home port of Samsun on Turkey's northern coast.

The Gorenler has come from all the way from Canakkale on the Aegean Sea.

Fierce competition: Captain Soner Karadeniz on the bridge of his fishing boat.

"October to November is when the fish migrate the most, to the Marmara and Aegean" seas, said Erdogan Kartal, head of Istanbul's fishery cooperative.

The 60-year-old, who has been fishing since he was a lad, said fish "are getting smaller and smaller.

"We have started to catch fish that have never had the chance to spawn, which is dangerous."

He no longer sees the mackerel that were once so abundant.

"Where are the beautiful mackerel that we used to eat every day?" Kartal lamented, saying quota and size limits had to be set.

"We have to make some sacrifices," he said. "If we let the [fish](#) pass, they will return."
