Mount Etna, Europe's most active volcano, was erupting on Sunday, spewing ash on Catania, eastern Sicily's largest city, and forcing a

suspension of flights at that city's airport.

Italy's National Institute of Geophysics and Volcanology, or INGV, which closely monitors Etna with instrumentation on the slopes, noted that [cloud cover](#) on a rainy day was impeding views of the eruption, which often serves up a spectacular display of flaming lava during the volcano's not infrequent eruptions.

The institute said that ash had fallen on Catania and at least one town on Mount Etna's inhabited slopes. No injuries were reported.

Catania airport said due to ashfall, [flight operations](#) were temporarily suspended.

INGV indicated that monitoring had recorded evidence of a stepping up in tremor activity in recent days.

People in the towns of Adrano and Biancavilla reported hearing loud booms emanating from the volcano on Sunday, the Italian news agency ANSA said.

Italy's national Civil Protection agency had noted on Thursday in an alert that in view of increased [volcanic activity](#), "sudden" variations of Etna's activity could occur.

In early 2021, an eruption of the volcano lasted several weeks.
