

# Greenpeace slams Poland's new river protection law

August 18 2023

---

Polish firefighters set up a floating dam to catch dead fish from the river Oder in August 2022.

Environmentalists on Friday slammed the passing of a controversial law in Poland on the revitalization of the Oder river, which was hit by toxic algae growth last year that caused mass fish deaths.

A toxic algae bloom hit the river on the Polish border with Germany last summer, with at least 300 tons of dead fish pulled from the [water](#) as tensions spiked between the two countries.

In response to the environmental disaster, Warsaw passed a new law Thursday evening which includes provision for new water treatment plants, and is intended to put more stringent requirements on industrial sites.

But Greenpeace said the government had "ignored the voice of the public and scientists" in passing the law, in a statement on the social media site X, formerly known as Twitter.

They criticized what they said was a lack of consultation and said that the bill will "not protect the Oder" and will continue to be polluted.

The World Wildlife Fund (WWF) had previously criticized the bill for focusing on "further regulation of the Oder (and other rivers), which will further destroy the ecosystem and its ability to clean itself."

The law allows the building of new infrastructure including the modernisation of sewer systems and constructing new water treatment plants, estimated to cost some 9.5 billion zlotys (\$2.3 billion).

The new law also forces large industrial sites, such as mines, to invest in systems to reduce saltwater discharges.

The toxic algae growth was sparked by the introduction of high levels of salt into the waters, according to the German environment ministry, which said that there was a "lack of available information" on the cause.

Poland also blamed [toxic algae](#) for the mass fish deaths, but said the disaster had most likely been caused by [poor water quality](#) as a result of

high temperatures and very low water levels.

Polish and German authorities on either side of the river have said they are determined to stop future disasters happening, but have clashed over responsibility and the best way to keep the algae in check.
