

Drawing a line back to the origin of life: Graphitization could provide simplicity scientists are looking for

April 18 2024

A schematic representation of the scenario we propose here for clean, high-yield production of prebiotic feedstock. Events move around clockwise from the top left: First, the Earth has a neutral atmosphere. This is reduced following a giant impact at 4.3 Ga by oxidation of the impactor's metal core to produce a massive H₂ atmosphere with significant methane and ammonia. This atmosphere quickly cools (in
