

Rare dark jellyfish showing up in San Diego Bay

14 July 2010

(AP) -- Scientists say a rare species of dark purple jellyfish is showing up in San Diego Bay and washing ashore on beaches.

Dr. Nigella Hillgarth of the Scripps Institution of Oceanography said Tuesday the Birch Aquarium has four of the jellies for display.

Hillgarth says the black sea nettle has turned up in coastal waters more frequently in recent years. Oceanographers don't know why, but think it may be due to warmer oceans or changes in the [plankton](#) populations the [jellyfish](#) eat.

The black sea nettle can grow up to 3 feet across with 30-foot-long tentacles.

Hillgarth says they sting, so boaters and beachgoers should admire them without touching.
