

# Rare Apple I computer sells for \$210,000 in London

November 23 2010, By BENJAMIN TIMMINS , Associated Press

---

Its processor works 1,000 times slower than the Apple iPad, but the first ever Apple computer has sold for 425 times the price.

The [Apple](#) I, one of only 200 such models ever made, was sold Tuesday afternoon at Christie's auction house in central London for 133,250 pounds (about \$210,000.) It came with its original packaging and a signed sales letter from [Steve Jobs](#), one of Apple Computer's co-founders and the current CEO of Apple Inc.

When the Apple I was introduced in 1976, it was the only personal

computer to come with a fully assembled motherboard, making it ready to use straight from the box - provided the user supplied a keyboard, power supply, and display, Christie's said.

It sold for \$666.66 and was available until it was discontinued in 1977.

Bidding on the Apple I came quickly, with the computer eventually going to Italian businessman and private collector Marco Boglione, who made his offer over the phone.

Marco's brother Francesco Boglione, who attended the auction in person, told The Associated Press that Marco's purchase was a testament to his love of computers.

"The first time I had heard of the idea of a personal computer, it was from Marco," Boglione said. He bought it "because he loves computers."

Present at the technology auction, which also included manuscripts, prints, and science-themed texts, was Apple [Computer](#) co-founder [Steve Wozniak](#), who agreed to add an autographed letter to the lot.

He said the auction was a historic moment for his work, especially when sold alongside such other technological greats as an Enigma, the German code-making machine, and writings of British mathematician Alan Turing, considered one of the founders of modern computing.

"Today my heart went out as I got to see things auctioned off like the Turing documents and the Enigma machine - and the Apple I," Wozniak told journalists after the auction. "It really was an important step, (even though) I didn't feel that way when I designed it."

"I'm very delighted for the gentleman who purchased it," he added.

Boglione said his brother's newly purchased Apple I would likely be returned to working condition - and eventually join a collection of Apple computers.

Inside the auction house Tuesday afternoon, many patrons studied the sale catalog using Apple's iPads and iPhones - a sign of the times, said Christie's Julian Wilson.

"It is a fitting illustration of how computers have revolutionized the world," he said.
