

South Korea tops in Internet download speed: study

20 September 2011

A South Korean student surfs the Internet in Seoul. South Korea has the world's top Internet download speeds followed by Romania, Bulgaria, Lithuania and Latvia, according to a study released on Tuesday

South Korea has the world's top Internet download speeds followed by Romania, Bulgaria, Lithuania and Latvia, according to a study released on Tuesday.

The United States placed just 26th in the analysis of the speed of worldwide [Internet connections](#) conducted by Pando Networks.

The average download speed in [South Korea](#) was 2,202 kilobytes per second, Pando said, with Romania (1,909 KBps), Bulgaria (1,611 KBps), Lithuania (1,462 KBps) and Latvia (1,377 KBps) rounding out the top five.

Japan was next at 1,364 KBps, followed by Sweden (1,234 KBps), Ukraine (1,190 KBps), Denmark (1,020 KBps) and Hong Kong (992 KBps).

The average download speed in the United States was 606 KBps, slightly better than the worldwide average of 580 KBps, Pando said.

The study was based on 27 million downloads by 20 million computers in 224 countries from January through June 2011, Pando said.

The slowest average download speed was recorded in the [Democratic Republic of Congo](#) at 13 KBps, followed by the Central African Republic at 14 KBps and the Comoros at 23 KBps.

"The disparities we found were striking," Pando chief executive Robert Levitan said in a release.

"While, in general, developed economies outpaced the [developing world](#) in average [download speeds](#), big names such as the US, UK, France, China and Canada were not even close to being the fastest," Levitan said.

Britain had average download speeds of 599 KBps, France 604 KBps, China 245 KBps, and Canada 579 KBps.

"Instead, we saw high speeds in markets such as Eastern Europe where focus on infrastructural development and favorable geography promote a higher level of connectivity," Levitan said.

An interactive map of the data is available at chartsbin.com/view/2484.
