

Chinese boat damaged Philippine reef

5 May 2013

This undated handout photo received on April 23, 2013, from the Philippine Coast Guard (PCG) shows a coast guard officer inspecting protected pangolins, wrapped in plastic bags and found hidden in a cargo boat at the port in Palawan island in the western Philippines. The boat crashed into one of the Philippines' most famous reefs and damaged almost 4,000 square metres of centuries-old coral.

A Chinese fishing vessel that crashed into one of the Philippines' most famous reefs damaged almost 4,000 square metres of centuries-old coral, the marine park said on Saturday.

Some 3,902 square metres (42,000 square feet) of coral was destroyed after the boat became stranded in the Tubbataha marine park—a UNESCO World Heritage-listed coral reef—the park management said.

"The damage the Chinese vessel caused to the reef is heart-breaking," Angelique Songco, the head of the marine park said in a statement after experts assessed the affected area.

Some of the coral destroyed by the Chinese vessel was 500 years old, Songco said, adding that the damage was much larger than the area destroyed when a [US Navy](#) minesweeper, the USS Guardian,

got stranded on Tubbataha in January.

The 48-metre (157-foot) vessel, carrying 12 suspected Chinese fishermen, plowed into the Tubbataha Reef near the western island of Palawan on April 8.

Authorities later found hundreds of dead pangolins, an internationally-protected species, hidden inside the vessel.

Tubbataha marine park information officer Glenda Simon told AFP the 12 Chinese would likely be fined about 95 million pesos (\$2.32 million) just for trespassing into the [marine park](#) and destroying the coral.

The government has already charged them with poaching and they could face an additional 12 to 20 years in jail for possession of the pangolins in violation of wildlife law.

Pangolins are widely hunted in parts of Asia for their meat, skin and scales and in China they are considered a delicacy and to have medicinal qualities.

The Philippine office of the World Wide Fund for Nature condemned the poaching of the [pangolins](#) after the men were caught, saying that growing demand in China was wiping the animal out in [Southeast Asia](#).
