

Leaving the driving to a computer has big benefits

22 October 2013, by Joan Lowy

But the study says considerable hurdles to widespread use of self-driving cars remain, the most important of which is likely to be cost.

In some ways, computers make ideal drivers: They don't drink, do drugs, get distracted, fall asleep, run red lights or tailgate. And their reaction times are quicker.

They do such a good job, in fact, that a new study by the Eno Center for Transportation says [self-driving cars](#) and trucks hold the potential to transform driving by eliminating the majority of [traffic deaths](#), significantly reducing congestion and providing billions of dollars in [economic benefits](#).

Former drivers may be able to safely work on laptops, eat meals, read books, watch movies and call friends as they travel. The elderly and disabled may gain critical mobility.
