

# Hello Kitty on space mission

15 August 2014

The moon-faced mouthless white cat first appeared in 1974 on a coin purse in Japan and has since built up a worldwide fan base, appearing on tens of thousands of products, from handbags to aircraft, in some 130 countries.

Hello Kitty arrives at the 1st Annual Children Mending Hearts Style Sunday in Beverly Hills, California on June 9, 2013

Hello Kitty has been sent on her first space mission, as Japan's global icon of cute celebrates its 40th birthday in extraterrestrial fashion.

A Kitty figure is now circling the Earth aboard a small satellite equipped with a digital message board, part of government-funded project to attract [private companies](#) into the space business.

The initiative calls on fans to come up with short messages that will be flashed on the board sitting above the four centimetre (1.5 inch) cat, according to Kitty's creator Sanrio.

The white feline with a red bow sits by a window looking back at Earth, with the board displaying messages of up to 180 characters in English and Japanese.

"It can be a message that you want to send from space to someone special on Earth, or it can be something more general," a spokesman for Tokyo-based Sanrio said Friday.

The satellite was launched in June from Russia.
