Calif. teachers fund to boost clean energy bets
19 September 2014, by The Associated Press

The California State Teachers' Retirement System says it plans to increase its investments in clean energy and technology to $3.7 billion, from $1.4 billion, over the next five years.

CalSTRS CEO Jack Ehnes says the pension fund is seeing more opportunities in low-carbon projects and technologies. The fund is hoping also to help push for stronger policies aimed at fighting climate change, Ehnes says.

If policies are adopted that impose a price on carbon emissions to discourage pollution, the fund could increase its investments further, to $9.5 billion.

The fund has a $188 billion portfolio.

The clean energy and technology investments will be made through holdings in private equity firms, bonds, and infrastructure as suitable investments come available, the fund says.
