

Image: Canadian wildfires continue and increase

1 June 2015

The majority of this week's fires have occurred in British Columbia, Alberta and Saskatchewan (21 percent, 26 percent and 13 percent respectively), while the majority of the area burned was in Alberta and Saskatchewan (23 percent and 40 percent respectively). Seasonal fire occurrence and area burned are both above the 10-year average.'

Hot spots abound in this image taken by NASA's Aqua satellite on May 30. When accompanied by smoke, as they are in this image, these hot spots are indicative of fire. Wildfire season in Canada is starting somewhat early this year due to higher than normal temperatures earlier in the season.

According to the Canadian Interagency Forest Fire Centre, Inc., the number of wildfires in 2014 was 1,178, burning a total of 24,022 hectares (59,360 acres). This year's [fire](#) season, which is just underway the past month or so, has already surpassed that with 2,503 fires burning 239,315 hectares (591,360 acres or 924 square miles)—this was as of May 31.

The Canadian Wildland Fire Information System website reports that, 'Nationally, the number of fires and the area burned have increased dramatically from last week, and are now well above average for this time of year.
