

SpaceX's 1st launch since rocket blast now bumped to January

7 December 2016, by Marcia Dunn

SpaceX's first launch since a rocket explosion at the pad has slipped to January.

The company said Wednesday it needs more time. So instead of launching in mid-December, SpaceX will try in early January.

SpaceX has been grounded three months since the dramatic accident, which originated in the [upper stage](#) of the Falcon rocket. The next Falcon to fly will carry 10 satellites for Iridium Communications, and launch from Southern California.

The Falcon and its satellite were destroyed in the massive fireball that erupted Sept. 1 as the rocket was being fueled for a test-firing. The pad remains damaged at Cape Canaveral Air Force Station. SpaceX hopes to switch soon to another pad at NASA's Kennedy Space Center.
