

# Rare albino orangutan rescued on Borneo island

May 2 2017

---

Albino orangutans are rare on Borneo island, where most have reddish-brown hair

A rare albino orangutan has been rescued on the Indonesian part of Borneo island where villagers were keeping the white-haired, blue-eyed creature in a cage, a protection group said Tuesday.

In an extremely unusual discovery, authorities picked up the female,

estimated to be five years old, in a remote village in Kapuas Hulu district.

The Borneo Orangutan Survival Foundation (BOSF), which is caring for the critically endangered ape—believed to be albino—said the organisation had never before in its 25-year history taken in such an orangutan.

Normal Bornean orangutans have reddish-brown hair.

Villagers said they captured the ape—who has not yet been named—on Thursday. Authorities rescued the ape two days later.

"Orangutans are rare, and an albino orangutan is even rarer," Nico Hermanu, a BOSF spokesman, told AFP.

"Since BOSF was founded 25 years ago, we had never before taken in an [albino](#) orangutan at our rehabilitation centre."

Pictures showed dried blood around the creature's nose, with the foundation saying the injury could have been sustained when the ape was fighting the villagers' attempts to capture it.

The orangutan has been taken to BOSF's rehabilitation centre for further assessment. Almost 500 orangutans are kept at the centre.

Orangutans on Borneo have seen their habitat shrink dramatically as the island's rainforests are increasingly turned into oil palm, rubber or paper plantations

The Bornean orangutan, which along with the Sumatran [orangutan](#) are Asia's only great apes, is classified by the International Union for Conservation of Nature as "critically endangered"—just one step away from extinction.

Around 100,000 are estimated to live on Borneo, which is divided between Malaysia, Brunei and Indonesia, down from 288,500 in 1973 and with their numbers expected to shrink to 47,000 by 2025, according to the IUCN.

The creatures have seen their habitat shrink dramatically as the island's rainforests are increasingly turned into oil palm, rubber or paper plantations, and are sometimes targeted by villagers who view them as

pests.
