

# Video: The 2017 Nobel Prize in Chemistry: Cryo-electron microscopy explained

5 October 2017

Credit: The American Chemical Society

Jacques Dubochet, Joachim Frank and Richard Henderson have claimed this year's Nobel Prize in Chemistry.

The trio earned the prize for their work on [cryo-electron microscopy](#), which is an imaging technique that lets researchers see proteins and other large biomolecules with atomic precision.

Learn more about this discovery and its impact in this video from *Speaking of Chemistry*.
