

Australia agrees Solomons internet cable after China concern

13 June 2018

It pledged more than Aus\$1.3 billion (US\$970 million) in its national budget last month to fund projects such as the communications cable, which will also link-up with Papua New Guinea.

Canberra and other regional capitals have become increasingly alarmed at Beijing's push into the Pacific through "soft diplomacy", which could potentially upset the strategic balance in the region.

Australian Foreign Minister Julie Bishop refused to detail what concerns Canberra had with telecom giant Huawei.

The impoverished Solomon Islands and Huawei inked a deal in late 2016 to construct the fibre-optic cable to Honiara to improve its often unreliable internet and phone services—but had a "change of heart" after Australia raised concerns

Australia will help fund and build an underseas communications cable to the Solomon Islands, it was agreed Wednesday, after the Pacific nation was convinced to drop a contract with Chinese company Huawei.

The impoverished country and Huawei inked a deal in late 2016 to construct the fibre-optic cable from Australia to Honiara to improve its often unreliable internet and phone services.

But Solomon Islands Prime Minister Rick Houenipwela said last week there had been a change of heart following "some concerns raised with us by Australia", without elaborating.

The move comes with Australia refocusing its foreign aid programmes to win hearts and minds in the island nations of the Pacific, as China flexes its muscle in the region.

Huawei was blocked from bidding for contracts on Australia's ambitious national broadband project in 2012, reportedly due to concerns about cyber-security

"I would not elaborate on security issues, that's not appropriate," she told reporters.

"What we have offered the Solomon Islands, and they have accepted, is an alternative to the offer, and ours is cheaper. It's likely to be a faster result for them, and technically superior."

Huawei was blocked from bidding for contracts on

Australia's ambitious national broadband project in 2012, reportedly due to concerns about cyber-security.

Huawei has long disputed claims of any links to the Chinese government.

According to broadcaster ABC, Australia's spy boss Nick Warner and other senior officials visited the Solomons last year and returned with concerns about Huawei being permitted to plug into the country's telecommunications infrastructure.

They reportedly believed that while Huawei was an independent company, it retained links to the Chinese government and could pose a threat to Australian infrastructure in the future.

After meeting Houenipwela in Canberra Wednesday, Prime Minister Malcolm Turnbull said Australia will also jointly fund a domestic telecommunication cable network linking remote provinces in the Solomons to the capital Honiara.

"As we step up our engagement in the Pacific, we are working as partners with Solomon Islands more closely than ever to ensure stability, security and prosperity in the region," he said.
