Subtropical Storm Andrea was gone before the storm could even reach Tropical Storm status. The last advisory for this storm was issued at 5:00pm AST/EDT on May 21, 2019.

Andrea went from a subtropical storm to a remnant low in two days. Its location 370 km west southwest of Bermuda meant that no coastal watches or warnings were necessary for this storm. Its maximum sustained winds are 35 mph and the present movement of the low is east northeast at 8 mph.

The system is expected to dissipate by Wednesday morning.

There are no other storms in the Atlantic basin or Central Pacific basin. There is a disturbance in the East North Pacific basin that has a 50% chance of
