

Our cities are full of parks, so why are we looking to golf courses for more open space?

From [walking times](#) to [tree cover targets](#), function has long dominated quality when defining urban open space. But this planning approach to open space significantly limits how parks are conceived.

I'm not usually a single issue voter, but I'm likely to support any [@CityofDarebin](#) candidate that commits to converting northcote golf club into a park for general use. It's open to everyone at the moment due to COVID-19 and it's pumping. [@kimlecerf pic.twitter.com/fkaP2i8e72](#)

The recent [opening of a golf course to the public](#) in the inner north of Melbourne caused a flurry of excitement. Since then, thousands of visitors have explored the expanse of manicured rolling greens, fairways and rough. Under [COVID restrictions](#) that require Melbournians to stay within 5 km of their homes, access to a very large and beautiful open space has provided welcome relief from the [well-worn tracks](#) up and down local creeks and around local ovals.

But beyond just exploring somewhere new, the meticulously crafted landscape of the Northcote public golf course offers a rare experience in Melbourne's ever more densely developed inner suburbs.

The past six months of lockdowns have sparked many discussions about our cities and lifestyles. And the importance of local parks has come to the fore. There are issues of equity in access to parks, walkability, housing, and the measured health and well-being effects of being outdoors.

These target-driven discussions fit with the dominant planning methods of Australian cities.

Why the pressure on golf courses?

Now, as people swarm to [urban parks](#) and gardens in record numbers, we need to give open space the same status as other valued urban assets such as roads and rail. And we need to work out what government, the [private sector](#), design professionals and the community can contribute to create better public open space over the next decade.

Returning to the Northcote golf course, a community group is [lobbying for ongoing community access](#). It's part of a wider discussion about the future of urban golf courses across Australia. In [Sydney](#), the Inner West Council recently [voted down](#) a hotly debated plan to give over half the Marrickville golf course to public green space. In [Brisbane](#), the Victoria Park Golf Course is being converted to public parkland.

BREAKING: Marrickville Golf Course, the

most publicly accessible course in Sydney, has been saved. The proposal to slice the course in half has been defeated. Now it's time for Royal Sydney to be opened up to dog walkers, pedestrians & picnickers as Marrickville has been for yrs.

— Darcy Byrne (@MayorDarcy) [September 22, 2020](#)

Urban golf courses are in the spotlight because of their [rarity as large green open spaces with mature plantings](#). The golfing community is [under pressure](#) to justify why so much precious city space is being reserved for their sport.

This discussion masks the underlying issue of inadequate urban planning. Successive governments have failed to set aside enough open space to cater for population growth.

For decades, the planning of our cities has occurred through growth models that give priority to economic development. Missing are significant large parks—the modern equivalents of the much-loved colonial layers of the Domains in [Sydney](#) and [Melbourne](#), [Hyde Park](#), [Royal Park](#) or [Kings Park](#) – to offset this growth.

The issue of open space quality becomes even more pressing when we turn to the outer suburbs. Lacking access to bays and beaches, the outer suburbs [no longer have](#) the "Australian dream" of the quarter-acre block as a counterbalance. Houses are constructed gutter to gutter, cars crowd the front yards, and the local [park](#) is often a footy oval with a playground.

Time to make open space a priority

COVID and the slowing economy provide an important opportunity to rethink our models for open space.

We need to challenge the binaries of competing values—public versus private, environment versus

community—that structure our cities. Our parks should not emerge through a debate over the best use of limited green space: biodiversity, community gardens, bike paths, wetlands, sport facilities, playgrounds and dog walking. None of these agendas are wrong, but there is a limit to how much space can be shared.

There are, of course, many examples of councils wanting to add more open green space. But it is important to have larger-scale and longer-term perspectives that can operate independently of local and state politics.

Global examples of open-space governance reveal shifts towards alternative funding models and public-private relationships for delivering quality, not just quantity. For example, in New York, the NGO [Design Trust for Public Space](#) works across government, community groups and the private sector to guide public space development. In Australia, the appointment of a [minister for public spaces](#) in Sydney and the [Living Melbourne](#) strategy both acknowledge the importance of overarching spatial governance.

The private sector is responsible too. Enabling large and high-quality open [space](#) across our cities means reviewing our expectations of funding and exploring new models led by the private sector. This includes not just funding construction but finding cash for ongoing park maintenance.

COVID has highlighted why the scale of [open space](#) is important. It's needed for maintaining distance between users but also for providing a sense of escape from increasing urban density, compounded by the many hours spent indoors.

It is widely recognized that an experience of nature is valuable for health and well-being. It's now time to link this directly to a diversity of high-quality park experiences.

All parks have not been created equally. Let's use this moment to determine a more ambitious future for our urban open spaces.
