Moon goes blood red this weekend: 'Eclipse for the Americas'
13 May 2022, by Marcia Dunn

Light shines from a total lunar eclipse over Santa Monica Beach in Santa Monica, Calif., Wednesday, May 26, 2021. A total lunar eclipse will grace the night skies this weekend, providing longer than usual thrills for stargazers across North and South America. The celestial action unfolds Sunday night, May 15, 2022 into early Monday morning, with the moon bathed in the reflected red and orange hues of Earth’s sunsets and sunrises for about 1 1/2 hours, the longest totality of the decade. It will be the first so-called blood moon in a year.Credit: AP Photo/Ringo H.W. Chiu

A total lunar eclipse will grace the night skies this weekend, providing longer than usual thrills for stargazers across North and South America. The celestial action unfolds Sunday night into early Monday morning, with the moon bathed in the reflected red and orange hues of Earth’s sunsets and sunrises for about 1 1/2 hours, one of the longest totalities of the decade. It will be the first so-called blood moon in a year.

All you need, he noted, are "patience and eyeballs."

"This is this gradual, slow, wonderful event that as long as it's clear where you are, you get to see it," Petro said.

If not, NASA will provide a livestream of the eclipse from various locations; so will the Slooh network of observatories.

There'll be another lengthy total lunar eclipse in November, with Africa and Europe lucking out again, but not the Americas. Then the next one isn't until 2025.

Launched last fall, NASA's asteroid-seeking Lucy spacecraft will photograph this weekend's event from 64 million miles (103 million kilometers) away, as ground controllers continue their effort to fix a loose solar panel.

NASA astronaut Jessica Watkins, a geologist, plans to set her alarm clock early aboard the International Space Station.

"Hopefully, we can be up in time and be at the right place at the right time to catch a good glimpse," she told The Associated Press earlier this week.
